DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claim 14 is rejected under 35 U.S.C. 102(e) as being anticipated by Vitkavage et al. (PN 5,858,873, of record).

Vitkavage et al. discloses, as shown in Figure 4, a semiconductor device comprising,

an insulator film (8) formed on a substrate (2);

a crystalline film (14) formed on the insulator;

wiring layer of copper (18) formed on the crystalline film,

wherein the crystalline film prevents copper diffusion from the wiring layer to the insulator film.

Application/Control Number: 09/657,055 Page 3

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the

manner in which the invention was made.

Claims 1-5 and 15-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Vitkavage et al. (PN 5,858,873, of record) in view of Gesheva et al. (Article).

With regard to claims 1, 5 and 15, Vitkavage et al. discloses all of the claimed limitations except

the material of the crystalline film containing tungsten, carbon, and nitrogen. However, Gesheva

et al. discloses a crystalline barrier film that has a material containing tungsten, carbon, and

nitrogen. Therefore, it would have been obvious to one of ordinary skill in the art at the time the

invention was made to form the crystalline film of Vitkavage et al. having a material containing

tungsten, carbon, and nitrogen, such as taught by Gesheva et al. in order to prevent the diffusion

of the wiring into the insulator film.

With regard to claims 2-4 and 16-18, Vitkavage et al. and Gesheva et al. disclose all of the

claimed limitations except the crystalline film having some properties. However, it would have

been obvious to one of ordinary skill in the art at the time the invention was made to form the

crystalline film of Vitkavage et al. and Gesheva et al. having some properties as claimed because

it depends to the desired contact resistance of the contact structure.

Response to Arguments

3. Applicant's arguments filed 06/03/02 have been fully considered but they are not persuasive.

It is argued, at page 8 of the Remarks, that Vitkavage et al. does not disclose the copper wiring formed on the crystalline film. This argument is not convincing because Vitkavage et al. discloses, as shown in Figure 4, a wiring layer of copper (18) forms on a crystalline film (14). Note that the claimed language does not state the wiring layer of copper forms on and directly contacts the crystalline film. Therefore, Applicant's claim 14 does not distinguish over the Vitkavage et al. reference.

Applicant's arguments with respect to claims 1 and 5 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37

Application/Control Number: 09/657,055

Art Unit: 2811

CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
